

CADWorx[®] P&ID and P&ID Professional

CADWorx P&ID gives users the flexibility to create process diagrams with varying levels of information and with the minimum of effort. CADWorx P&ID Professional also features CADWorx Loops, CADWorx IP (Internet Publisher[®]) and live database links.

CADWorx P&ID and P&ID Professional are the most powerful and easiest to use tools for Piping and Instrument Diagramming.

Intelligent Process Diagrams

You can create smart P&ID's without changing the way your drawings look or the symbols that you use. Additionally, with P&ID Professional you can add component information that links to external databases for further design and engineering collaboration. Your diagrams can also be easily specification driven.

Industry Standard Symbols

CADWorx P&ID comes with an extensive symbols library. You can easily add your own symbols and assemblies, with full CADWorx functionality and intelligence, without the need of programming.

Legacy Drawing Conversion

Your old drawings and the information they contain can still be useful! CADWorx P&ID includes powerful routines that make it easy to link legacy P&ID components to your database.

User-defined Bi-directional Project Databases

With CADWorx P&ID Professional you can create user-defined databases without any database knowledge. Databases are bi-directionally linked to project drawings, ensuring drawings and database are always in sync.

Project Document Links

CADWorx P&ID Professional allows users to link any number of documents to their P&ID components and store this information in project databases.

Included with CADWorx P&ID Professional:

Automatic Instrument Loop Diagrams

CADWorx Loops allows users to automatically produce instrument loops diagrams from their project databases with user-defined templates.

Publishing of Project Diagrams and Databases

CADWorx IP (Internet Publisher[®]) is the first product on the market that lets you publish your P&ID and associated data so that it can be viewed via a browser.

CADWorx P&ID Professional Option:

Intelligent Datasheet Capabilities

Available CADWorx Instrument and Equipment Datasheet modules can be used standalone or to leverage intelligent data by linking to CADWorx P&ID Professional project databases.

Features

- AutoCAD based
- Intelligent process diagrams
- Industry standard symbols
- Legacy drawing conversion
- Project document links
- User-defined bi-directional project databases
- Bi-directional database links
- Automatic instrument loop diagrams
- Publishing of project diagrams and databases
- Intelligent datasheet capabilities

Technical Specs

- Runs on AutoCAD versions 2005 to 2008

Application Areas

Process Diagrams, P&ID's, Process and Plant Design, Piping, Petrochemical, Chemical, Power, Food, Beverage, Brewing, Pharmaceutical, Water Treatment, Building Services and Architectural.
